24. Read the following passages carefully and answer the question that follows:

The phenomenon of child labour is quite complex. Children work because they belong to poor families who cannot strive without the benefit of the income which accrues to the family on account of child labour. Any attempt to abolish it through legal resource would, under the circumstances, not be practical. The only alternative is to ban child labour in hazardous areas and to regulate and ameliorate the conditions of work in other areas. Many developing countries, including India, have accepted this approach.

**Direction for (Q. 90-93)** Read the following passage carefully and answer the question (Q 90-93) that follow:

"River should link, not divide us" said the Indian Prime Minister expressing concern over inter-state disputes and urged state government to show "understanding and consideration, statesmanship and an application of the other point of view".

Water conflicts in India now reach every level divide every segment of our society. political parties, states, regions and sub-regions within states, districts, castes and groups and individual farmers. Water conflicts within and between many developing countries are also taking a serious turn. Fortunately the "Water Wars", forecast by so many, have not yet materialized. War has taken place, but over oil, not water. Water is radically altering and affecting political boundaries all over the world, between as well as within countries. In India water conflicts are likely to worsen before they begin to be resolved. Till then they pose a significant threat to economic growth, security and health of the ecosystem and the victims: are likely to be the poorest of the poor as well as the very source of water- rivers, wetlands and aquifers.

Conflicts might sound bad or negative, but they are logical developments in the absence of proper democratic, legal and administrative mechanisms to handle issues at the root of water conflicts. Part of the problem stems from the specific nature of water, namely that water is divisible and amenable to sharing. are unit of water used by one is a unit deemed to others. It has multiple uses and users and involves resultant trade-offs. Excludability is an inherent problem and very often exclusion costs involved are very high. It involves the issue of graded scales and boundaries and need for evolving a corresponding understanding around them. Finally, the way water is planned, used and managed causes externalities, both positive and negative and many of them are unidirectional and asymmetric.

There is a relatively greater visibility as well as a greater body of experience in evolving policies, frameworks, legal setups and administrative mechanisms dealing with immobile natural resources, however contested the space may be Reformists as well as revolutionary movements are rooted in issues related to land. Several political and legal interventions addressing the issue of equity and social justice has been

"Many Sociologists have argued that there is a functional relationship between education and economic systems. They point to the fact that mass formal education began in industrial society and is an established part of all industrial societies. They note that the expansion of the economies of industrial societies is accompanied by a corresponding expansion of their educational systems. They explain this correspondence in terms of the needs of industry for skilled and trained man-power, needs which are met by the educational system. Thus, the provision of mass elementary education in Britain in 1870 can be seen as a response to the needs of industry for a literate and numerate work force at a time when industrial processes were becoming more complex and the demand for technical skills was steadily growing".

71. The industry needs a literate work force because:
